Pro Tray Washer

For the economically minded grower who recycles trays and flats, the Pro Tray Washer provides automated speed and efficiency in preparing trays for reuse.

Used trays are loaded onto the conveyor belt and then enter a totally enclosed stainless steel hood where they are washed. The hood provides 18" x 28" x 6'5" of clearance for various sized trays. Pressure pumps (options of low and high pressure) provide ample cleaning power with jet nozzles staged for maximum efficiency with hot water wash and cold water rinse. An optional chemical injector can be utilized for wash additives or disinfectant at exit. A recirculation system is optional to eliminate wasted water and reduce the cost of reheating the water.

Trays exit the washer still carried by conveyor which extends beyond hooded wash unit. Variable speed controls allow the user to set the pace of cleaning. Adjustable tray stabilizing rails provide the user with the ability to change tray size to meet their needs. Available in single or three phase voltage and can be built to customer specific requirements.

Specifications

Power	220 V single or three phase
Production	Up to 300 trays per hour
Features	Optional hot water recirculation system Quickly adjusts to different tray sizes Hot wash with cold rinse section High and low pressure systems available

Made in the USA
