# Coir Processor

The Coir processor is designed to break apart compressed coir bricks, bales or slabs. The coir is pulled into small chunks, passed through a fluffer-head to expand but not cut the fibers and screened to size. Water is added through water bars in the exit auger and additional water is added in the unloading auger. This machine has a variable processing rate per hour depending on screen size. An in-feed conveyor can be used to keep this machine at maximum output.

## Specifications

Patent Pending

Power	220V / single or three phase
Production	Up to 40 cubic yards per hour
Dimensions	100"L x 46"W x 90"H
Weight	Approximately 4,100 lbs
Options	In-feed loading conveyor Optional screen Integration to mixing system

Optional  
Coir Loader

Made in the USA
