131[®] Pro

Flat and Pot Filling System

Model # 13183

The 131 Pro Flat and Pot Filling System is designed for growers who need high speed production with uniform filling of multiple types of growing containers, including plug flats, hanging baskets, and nursery pots.

A variable speed hopper supplies soil to the filling conveyor. Compaction is controlled by an adjustable power sweep assembly. Excess soil is removed from the container by an adjustable soil wiper. Trays or pots then pass through a rotary brush where any excess material is removed.

As filled containers cross the powered pot transfer, unused material is returned to the hopper via the improved heavy duty auger soil return (optional bucket system). The 131 Pro will fill pots up to 16" (optional 18") high and flats up to 18" wide.

Specifications

The 131 Pro comes with a touch screen.

No need to toggle through screens. The start-up screen includes hopper and belt speed with master speed control, and is very easy to use. Additionally, should you have a problem, it will quickly be identified. There is also a maintenance screen that allows you to run all motors independently for service work. Very useful for clean-out and testing. Plus there are no switches or buttons to accumulate with dirt.

Power	6 HP/ 220V/ Single or Three Phase/ 50 or 60 HZ
Production	Up to 1,800 flats per hour
Features	1.5 cubic yard hopper Full variable speed Optional compacting roller Drill option
Dimensions	176"L x 61"W x 118"H
Weight	Approximately 2,300 lbs

Made in the USA
